

Knowledge Know-How – My Tech Stack

About Me

I am passionate about Artificial Intelligence, Machine Learning, Data Analytics, and Full-Stack Development. I regularly work on AI applications, data visualization projects, web applications, and automation workflows. The following sections summarize the technologies and tools I use confidently in my projects.

1. Development Environment & Coding Tools

Tools I Use

- Antigravity IDE
- Jupyter Notebook
- Google Colab
- GitHub
- Power BI
- Microsoft Excel

Experience

I use Antigravity IDE for coding and application development. Jupyter Notebook and Google Colab help me build and test machine learning models, perform data analysis, and experiment with AI workflows. GitHub is used for version control and project hosting. Power BI and Excel are used for data cleaning, reporting, and dashboard creation.

2. Web Frameworks

Frameworks I Use

- Streamlit
- React

Experience

I use Streamlit to build interactive data science and AI applications. React is used for developing modern, responsive user interfaces and web applications.

3. AI/ML Frameworks

Frameworks I Use

- Pandas
- NumPy
- Matplotlib
- Scikit-learn

Experience

Pandas and NumPy are my primary tools for data manipulation and numerical analysis. Matplotlib is used for creating visualizations and insights from data. Scikit-learn is used for machine learning tasks such as classification, regression, clustering, and model evaluation.

4. Agentic AI Tools

Tools I Use

- LangChain
- CrewAI
- OpenAI Agents SDK
- n8n

Experience

I use agentic AI frameworks to create intelligent workflows, automate business processes, connect AI models with external tools, and develop multi-agent systems capable of handling complex tasks.

5. LLM Platforms

Platforms I Use

- ChatGPT (OpenAI)
- Google Gemini
- Hugging Face
- Claude
- Ollama

Experience

I use Large Language Models for content generation, document analysis, chatbot development, coding assistance, research, and AI-powered automation. These platforms help me build practical AI solutions and explore advanced language model capabilities.

6. AI Tools I Frequently Use

Tools I Use Regularly

- ChatGPT
- Google Gemini
- Claude

Experience

These AI tools support my daily workflow by assisting with coding, debugging, learning new technologies, content creation, project planning, and problem-solving.

7. Cloud Platforms

Platforms I Use

- Vercel
- Netlify
- Google Colab
- GitHub Pages

Experience

I use cloud platforms to deploy web applications, host project portfolios, run machine learning notebooks, and share projects with others. These services enable efficient development and deployment of modern applications.

8. Databases

Databases I Use

- MySQL
- Firebase Firestore

Experience

I use MySQL for relational database management and structured data storage. Firebase Firestore is used for cloud-based applications that require real-time data synchronization and scalable backend services.

Core Areas of Interest

- Artificial Intelligence
- Machine Learning
- Generative AI
- Data Analytics
- Full-Stack Development
- Automation Workflows

GitHub Portfolio

GitHub Profile: github.com/Jishnu-Aji

Conclusion

My technology stack combines AI, machine learning, web development, cloud platforms, databases, and data analytics tools. Through continuous learning and hands-on projects, I strive to build impactful solutions that solve real-world problems and enhance productivity through technology.
